Project Student Digital Ambassador Portfolio

Course	Digital Literacy
Name	Sparsh Jain
Registration Number	25BCE10222
Branch	BTech CSE core
Year	2025

1. Introduction

I am working on this project as a Student Digital Ambassador at VIT Bhopal University. My main goal is to show that I have digital literacy skills. These skills include being good at online branding and knowing about cybersecurity. I did five tasks to build a portfolio that can help my fellow students have better digital habits.

2. Task 1 Write-up: Digital Literacy Infographic

I used Canva to make an infographic about digital literacy. This infographic has definitions, safe internet practices and important tools for students. I made the design clean and easy to read with icons. I found it interesting that one picture can make complex security topics like Two-Factor Authentication easy to understand.

3. Task 2 Write-up: Digital Portfolio

For this task I worked on GitHub, LinkedIn and Kaggle. LinkedIn helps me build a network and GitHub is where I keep my technical work. Over the four years I plan to use these platforms to show what I have learned share my coding projects and connect with people who can help me get internships.

4. Task 3 Write-up: Collaboration & Coding

I used HackerRank to practice my coding skills with the 'Python Introduction' challenge. I also made a 'Digital Literacy Awareness Quiz' with Google Forms to see how much my fellow students know about security. These tools are important for my studies because they help me build my skills and work with my peers.

5. Task 4 Write-up: Professional Communication

I looked at a situation where a student asked for an extension in a way and got refused. If the student had been polite and professional it could have been different. I also learned about the "Locker Room Test" for media, which shows how one post can affect your professional reputation.

6. Task 5 Write-up: Cybercrime Awareness

I was surprised to learn that attackers spend a lot of time researching before they attack. It is not about hacking but also about manipulating people. So, I will be more careful. Not use public Wi-Fi for important things. Instead, I will use a VPN or my mobile data.

7. Conclusion

This project has taught me a lot about my footprint. I learned that digital literacy is not, about using tools but about using them in a responsible and safe way to have a good online presence.
